

# KINETICO WATER NEUTRALIZER

Better Water For Your Home

- Non-Electric
- Upflow Water Operation
- Effective pH Control
- Compatible with Other Kinetico Equipment

## What Makes The Kinetico Water Neutralizer Different?

**Effective pH Control:** Raises acid pH levels. Eliminates blue-green staining and corrosion of plumbing caused by low pH.

**Effective Iron Filtration Pretreatment:** Properly prepares water for iron removal. Eliminates iron staining of plumbing, appliances, clothing and fixtures when used in conjunction with Kinetico iron filtration equipment.

**Combined Backwash and Service Cycle:** Lowers maintenance and pressure drop. Keeps media from clumping, maintains top performance and increases flow of water.

**Upflow Water Operation:** Keeps media bed loose and provides optimum contact time with media for better results. Separate backwash cycle is not necessary, so water is not wasted.

**Gravel and Fine Calcite Media Bed:** Provides uniform flow through media with more surface area for filtration. Ensures top performance.

**Non-Electric Operation:** Reliable. No timers or computers to set, adjust, repair or replace.

**Large Tank:** Increases capacity, minimizes maintenance and ensures better performance.

**Corrosion-Resistant Tank:** Long lasting. Can endure harsh environments.

**Easy Access Refill:** No need to remove tank to replenish media.

**Outstanding Warranty:** Dependability, peace of mind.
